Recall the command to create a collection in MongoDB? CO3 4. List the built-in roles available in MongoDB. CO3 5. Label the advantages of using TypeScript with Angular. CO4 6. How does Express.js handle multiple routes for different HTTP methods? CO4 7. Compare static and dynamic routing in Express. CO4 8. Why is Express.js preferred over the default HTTP module in Node.js? CO4 9. Name the default port number for MongoDB? CO3 10. Recall the function of the MongoDB configuration file? CO3 11. What is the command to drop a database in MongoDB? CO3 12. List the significances of authentication in MongoDB? CO3 13. Compare JavaScript and TypeScript in terms of features. CO4 14. How does Express.js simplify the creation of REST APIs? CO4 15. Why is static typing beneficial in Angular applications? CO4 16. Label the different types of data binding supported in Angular. CO4

Here are concise answers to the Part B 2-mark questions related to MongoDB, Express.js, and Angular:

1. What is the purpose of the mongod command?
It starts the MongoDB server (the database daemon) to listen for client connections.
2. Name any two roles that can be assigned to a user in MongoDB.
Examples: read, readWrite

3. Recall the command to create a collection in MongoDB?
`db.createCollection("collectionName")`
4. List the built-in roles available in MongoDB.
Examples include: read, readWrite, dbAdmin, userAdmin, clusterAdmin
5. Label the advantages of using TypeScript with Angular.
Static typing, improved tooling, early error detection, better code maintainability
6. How does Express.js handle multiple routes for different HTTP methods?
By defining route handlers with `app.get()`, `app.post()`, `app.put()`, `app.delete()`, etc. for the same route path.
7. Compare static and dynamic routing in Express.
Static routing uses predefined routes; dynamic routing uses route parameters to handle variable paths.
8. Why is Express.js preferred over the default HTTP module in Node.js?
Simplifies routing, middleware support, easier request handling, better scalability for web apps.
9. Name the default port number for MongoDB?
27017
10. Recall the function of the MongoDB configuration file?
Defines settings like storage paths, network interfaces, security policies for the MongoDB server.
11. What is the command to drop a database in MongoDB?
use dbName; `db.dropDatabase()`
12. List the significances of authentication in MongoDB?
Access control, security enforcement, user identity verification, data protection.
13. Compare JavaScript and TypeScript in terms of features.
TypeScript adds static typing, interfaces, and compile-time checks to JavaScript's dynamic nature.
14. How does Express.js simplify the creation of REST APIs?
Provides routing, middleware, and easy request/response management for RESTful endpoints.
15. Why is static typing beneficial in Angular applications?
Reduces runtime errors, improves developer productivity, enables better tooling and refactoring.
16. Label the different types of data binding supported in Angular.
Interpolation, property binding, event binding, two-way binding

If you want expanded explanations or examples for any, just ask!
